

Introduction to Wireless and Mobile Networking

Homework 3: Readme

B11901110 陳璿吉

The code is written in MATLAB R2023b, so the file extension is “.m”. In order to reproduce the result illustrated in the report, just open this file in MATLAB and run it. There shouldn’t be any problem executing the code. However, to simulate the random walk probability model, the mode of random number generator is set to “shuffle”, which means the result varies in each simulation. Please keep this in mind during the simulation.
